There are almost 2,000 UNECA Documents in the Institutional Repository’s Natural Resources Collection, and almost 3,000 in the Agriculture, Forestry and Fishing Collection.

Can you guess what the earliest UNECA publication on natural resource development was about?

**Resource Abundance and Economic Development**
Richard M Auty, Oxford Univ. Press, 2004

Abstract: This book explores the factors behind the underperformance of resource-abundant developing countries compared to resource-deficient countries. Drawing on research from various subfields within economics literature, it argues that since the 1960s, the natural resource endowment of a developing country has strongly affected its capital utilisation efficiency and the nature of its long-term development trajectory… (Link to eBook)

A few selections in print at ECA Library: Come take a look!

**Resource revolution: meeting the world’s energy, materials, food and water needs**  
Contents: The report aims to offer new insights into how demand for resources has evolved and how it is likely to develop over the next 20 years. It analyzes how demand can be met through expanded supply and higher resource productivity with innovation potentially playing a central role as new technologies scale up across resource systems. It discusses the major resource and environmental risks and quantifies options for addressing them.

**Resource and environmental economics: modern issues and applications**  
Contents: This important book deals with the essential principles of resource and environmental economics, provides applications to contemporary issues in this field, and outlines and assesses policies being used or proposed for managing the use of environmental and natural resources. Furthermore, using minimal technical jargon, the book takes into account aspects of modern economic analysis such as the costs of and constraints on decision-making and the transaction costs involved in policy implementation.

**From curse to blessing?: using natural resources to fuel sustainable development**  
Contents: This book investigates how revenues derived from natural resource exploitation can be translated into real benefits for the citizens of resource-rich countries.  
- Shows how despite unprecedentedly high prices of natural resources such as oil and gas on the global market, resource-rich countries are home to over 60% of the world’s poorest people  
- Discusses the counterintuitive phenomenon known as the “resource curse” and how mineral wealth can impoverish countries  
- Presents the major obstacles for the international community in the fight against poverty and in the achievement of the Millennium Development Goals  
- Debates the ways to lift the curse, and suggests policy interventions to break the vicious circle  
- Includes cross-country comparisons as well as focusing on countries such as Azerbaijan, Democratic Republic of Congo, Nigeria and the Russian Federation

Our Mission:  
The mission of the ECA Library, as a central catalyst for organizational effectiveness, is to continuously enrich and add value to the Commission’s knowledge ecosystem, by providing reliable access to high quality resources and services to staff members and other stakeholders, wherever they may be.

Our Vision:  
To establish, maintain and operate a regional, modern, "state-of-the-art, automated" library and documentation centre. The centre will be dynamic, flexible and more service oriented in providing access to information and will strive to meet the information needs to ECA staff as well as the research community in Africa.
